Search for Assoc Dean for Research & Grad Studies Underway

The search to replace Dr. **Michael McEntee** as interim Associate Dean for Research and Graduate Studies is underway, with an application recruitment page, as well as SciJobs (an online search engine associated with the journal *Science*) and HigherEd Jobs.

Applicants are desired to have a PhD, DVM, MD, or similar professional degree and must also have maintained a federally-funded (NIH, USDA, or comparable) biomedical research program, preferably in an academic institution, with at least one transferable federal grant as PI at the level of an NIH R01 or equivalent. Applicants should also have evidence of successful primary mentorship of graduate students awarded PhD degrees, membership on at least one prominent scientific journal editorial board, service on federal grant review committees, organizational leadership, and knowledge of pre- and post-award processes relating to funded research, including research compliance.

The position is a full-time, tenure-track appointment at the professor level with expectations that the incumbent will maintain an active, federally-funded research program, will work to develop and administer a federal training grant(s) for graduate students, and will increase the breadth and depth of basic, translational, and clinical science within the college.

The search committee expects interviews to begin sometime after the new year, with an optimistic goal of having someone in place by the end of the summer. The committee comprises Drs. **Stephen Kania** (chair), William Brown, **Amy LeBlanc**, **Seung Baek**, Naima Moustaid-Moussa, and **David Brian**. ☺

TERA/PAMS Electronic Proposal Submission System Now Online

In September, the new TERA/PAMS proposal submission system went live. For all subsequent grant submissions, investigators should use this electronic system in place of the paper “Permission to Apply for External Funding” form.

The system itself may be accessed at <https://utia.tera.tennessee.edu/ramses/>, and a link is also included on the UTCVM Research Web site. Users should be careful to **avoid erroneously using the UT Knoxville TERA site, which will route the proposal to the incorrect location and require users to re-enter all information.**

Tutorials may be found at <http://taes.utk.edu/upload/AgRsch/SponsoredPrograms/TERA/Training/>, and these include short videos in addition to the recorded full PI training session, in case you missed it. ☺

Rouse J Immunol Article Featured “In This Issue”– Top 10%

The August 15 (Vol. 187, No. 4) issue of the *Journal of Immunology* featured Dr. **Barry Rouse’s** article “Role of IL-17 and Th17 cells in herpes simplex virus-induced corneal immunopathology” in its “In This Issue” feature. “In This Issue” highlights the top 10% of articles in each issue.

Other authors on the paper were current and former members of Rouse’s lab: **Amol Suryawanshi**, **Tamara Veiga-Parga**, Naveen K. Rajasagi, Pradeep Babu Jagdeesh Reddy, Sharvan Sehrawat, and **Shalini Sharma**. The study indicates IL-17 as a potential therapeutic target for the treatment of herpes simplex virus-induced ocular stromal keratitis. ☺

Knowledge DISCOVERY

Quertle Promises Smarter, Easier Way to Search Biomedical Literature

The National Library of Medicine (NLM), a division of the National Institutes of Health, recently awarded *Quertle* with first place for the NLM's Software Challenge on Innovative Uses of NLM Information.

Quertle is a fairly new, free search engine geared toward biomedical literature. It uses semantics to produce a relationship-driven search. For example, when searching for conditions affected by caffeine, a traditional search engine like PubMed or Google would require the user to enter multiple search terms like "caffeine AND migraine," "caffeine AND asthma," and so on. *Quertle*, however, allows users to specify "Power Terms" to search an array of diseases simply by entering "caffeine \$Diseases."

Capitalization may be used to narrow results like "NO" for "nitrous oxide" instead of "no," which indicates a negative.

Quertle searches PubMed, full-text articles, grant applications, TOXLINE, white papers, and biomedical news simultaneously. Users may save their searches and set up alerts. The results may be refined, sorted, and exported just like with any other database.

Because *Quertle* has existed for only 2 years, it still has its negative attributes, such as containing advertisements in the middle of search results and being unable to recognize Boolean operators like "AND" and "OR." However, other filtering mechanisms may render those operators unnecessary. In addition, it is still not considered optimal for searching for alternatives to animal use.

For more information on using *Quertle*, or to try it out yourself, visit <http://quertle.info/>. ☺

Research Resource Spotlight

'Jane' Eases Task of Selecting a Journal for Your Manuscript

The Journal/Author Name Estimator (Jane) identifies potential journals to which to submit manuscripts based on the manuscript's title or abstract. Jane allows authors to enter either of these items and then populates a list of potential journals based on those included in MedLine.

Jane searches for the 50 articles that are most similar to your input. For each of these articles, Jane calculates a similarity score between that article and your input. The similarity scores of all articles belonging to a certain journal are summed to calculate the confidence score for each journal. The results are then ranked by confidence score.

Also calculated with the results is Article Influence (AI), which measures how often articles in the journal are cited within the first 5 years after publication. These citations are weighted based on the influence of the journals from which citations are received: being cited in an article in *Science* can boost a journal's AI more than being cited in an obscure journal.

The information sent to the Jane server is not stored but is kept in memory only as long as needed to calculate the scores and formulate the response page. The server itself is reportedly protected using standard protection measures. However, for extra-sensitive material, Jane administrators offer the option to "scramble" your input (button below the input box). Scrambling simply entails putting all the words in alphabetical order via your browser (i.e. no information is sent for the scrambling). Although putting the words in alphabetical order does not completely disguise input, it does make it extremely hard to read yet has no effect on Jane's performance.

The free, online tool also allows users to search for authors of similar papers and for articles with similar content.

To try Jane, visit www.biosemantics.org/jane/index.php. ☺

Reilly Earns Abstract Award

Dr. **Sabrina Reilly**, senior anesthesiology resident in the Small Animal Clinical Sciences Department received an honorable mention for the 2011 Smiths Medical/SurgiVet Resident Research Abstract Awards.

She was one of two residents to receive the distinction at this year's annual meeting of the American College of Veterinary Anesthesiologists held in conjunction with the International Veterinary Emergency and Critical Care Society's annual meeting.

Her abstract was titled "Fentanyl decreases sevoflurane minimum alveolar concentration preventing motor movement (MACNM) in dogs without evidence of acute tolerance." ☺
