

predominately residential and educational
large figure/ground void along lake
create a development rich in multi-use spaces

program

new masterplan provides density - population,
social, amenity, activity - and connectivity to the
rest of the city

reconnect street grid locally, as well as to surrounding
neighborhoods

street grid

establish contextual connections and promote a
variety of movement

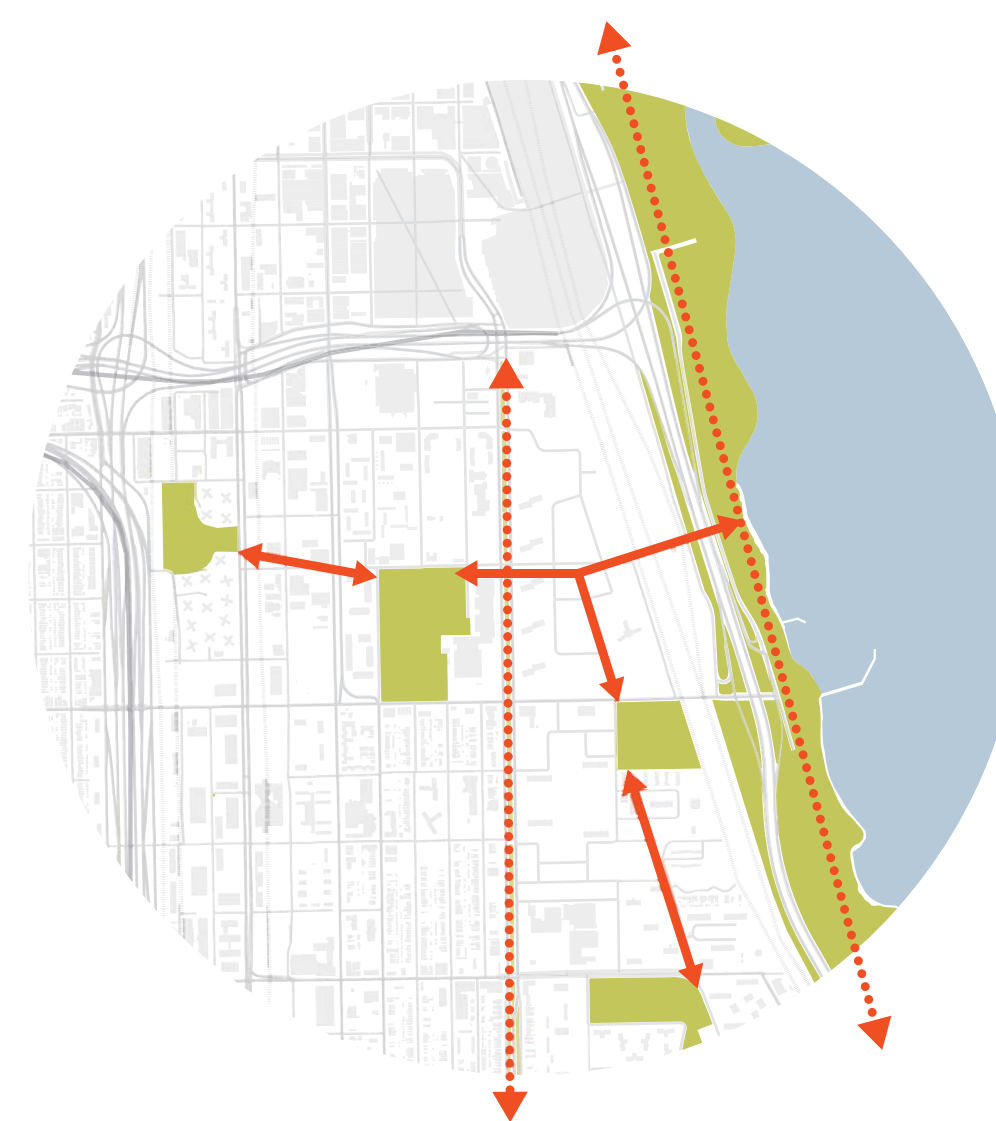

create transit stops throughout neighborhood to match stop
frequency of other locations and transit lines

METRA stops

relocate transit stop for optimal exposure
create new stops along route to promote further
development

park-lined streets will unify the parks system in the
neighborhood

park connections

connect neighborhood parks together
link with linear park to create a variety of activities,
locations, events for entire city

being unable to remove transportation networks,
create linkages for various traffic - pedestrian, bicycle, vehicular
- throughout site

lake connections

reconnect the neighborhood with existing local
outdoor amenities; creates multiplicity and variety
