Three UT Researchers Win CAREER Awards

Three University of Tennessee faculty have received substantial support from the National Science Foundation to pursue early-career research projects.

Jon Philip Camden, **Norman Mannella**, and **Kivanc Ekici** have received NSF Faculty Early Career Development awards, also known as CAREER awards.

The NSF describes the CAREER award as the foundation's most prestigious award for junior faculty who integrate outstanding research with excellent educational outreach.

Camden, an assistant professor in chemistry, will study a special form of spectroscopy, a method for examining surfaces at a molecular level.

Ekici, an assistant professor in aerospace engineering, will research new ways to detect unstable aerodynamic forces to improve the design of wind turbine blades.

Mannella, an assistant professor in physics, will study unconventional particle interactions in high-temperature superconductors.

Camden and Mannella will involve science and math students from Hardin Valley Academy in the educational outreach components of their projects. Ekici will provide summer workshops for high school science teachers and recruit a high school senior for a research experience.
