Research Assistants; Knoxville, Spring Hill, Jackson, Research Associates; Greeneville,  
Springfield, Martin, Ames Plantation, Milan respectively.

RECOMMENDED CROP VARIETIES

Listed Alphabetically

Corn Hybrids

See Table A.

Oats

Fall: Southern States 76-30.

Spring: Don, Larry, Ogle, and Otee.

Wheat

FFR 525, FFR 350<sup>1</sup>, FFR 555, Freedom, Gore<sup>1</sup>, Hickory, Northrup King Coker 9803, Madison, Mallard<sup>1</sup>, Pioneer brand 2580, Pioneer brand 2684, Pioneer brand 2628, Northrup King 9543, Jackson, Sawyer<sup>1</sup>, Verne, and Wakefield.

Barley

Anson and Wysor.

Alfalfa

Aggressor, Alfagraze, Apollo Supreme<sup>1</sup>, Belmont, Cimarron VR, Chief, Garst 636, N.K. MultiKing 1, Legacy, and Pioneer 5432.

Red Clover

Cinnamon, Redland III, Redland II, Reddy, and Redman.

Grain Sorghum

Non-Bird Resistant: DeKalb DK 40y, Deltapine G-522A, Deltapine 1552, Deltapine G-522DR, HyPerformer Wings, HyPerformer Cherokee, HyPerformer 1225 DR, Pioneer brand 8212y<sup>1,2</sup>, Pioneer brand 8446<sup>1,2</sup> Topaz<sup>2</sup>, and Northrup King KS 710.

Soybeans

See Table B.

Sorghum x Sudangrass crosses

DeKalb SX-17, FFR 202, Sordan 79, Tastemaker III.

Sudangrass

Trudan 8.

Pearlmillet

Millex 24, Millhy 99<sup>1,2</sup>, and Tifleaf I<sup>1,2</sup>.

Summer Annual recommendations are based on production when allowed to grow 20-40 inches before cutting or grazing.

<sup>1</sup>Present plans indicate that this variety will not be recommended after 1997.

<sup>2</sup>These varieties were not submitted for testing in 1996.

Table A

The recommended corn hybrids for 1997 are as follows:

Make yield comparisons only within a given group because all maturity groups are not evaluated at the same location.

Color--Yellow Brand	Maturity---Early Hybrid	3 Yr. Avg. Yield	Grain Moisture at Harvest
HyPerformer	HS 9773	183	15.7
HyPerformer	HY 9899 V	183	17.1
Beck	72 X	181	14.6
Pioneer	3245	180	14.3
Pioneer	3279	176	14.2
FFR	793	169	14.6
Northrup King	N 7590	166	14.3
Pioneer	3394	166	13.6
HyPerformer	HS 9843	165	14.3
Not included in 1996 trials

<sup>1</sup>Present plans indicate that this variety will not be recommended after 1997.

## SOYBEANS

### Maturity Group IV

Asgrow A4715: Has white flowers, tawny pubescence, and seed with a black hila. Has resistance to races 3 and 14 soybean cyst nematode. Maturity Group IV.

Chesapeake: Has white flowers, gray pubescence, and tan podwall, seed coats are yellow with buff hila. Has no resistance to soybean cyst nematode. Maturity group IV.

Delsoy 4710: Has purple flowers, tawny pubescence and seed with a black hila. Resistant to races 3 and 14 soybean cyst nematode. Maturity Group IV.

Deltapine DP 3478: Has purple flowers, tawny pubescence and seed with black hila. Reported to have resistance to stem canker and SDS. Maturity group IV.

Deltapine DP 3456: Has white flowers, tawny pubescence, and seed with black hila. Maturity Group IV.

Delsoy 4900: Has purple flowers, tawny (brown) pubescence and seed with a brown hila. Resistant to race 3 soybean cyst nematode. Maturity Group IV.

Hartz H 4994: Has purple flowers, tawny (brown) pubescence and seed with a black hila. Reported to have resistance to race 3 and 14 soybean cyst nematode. Maturity Group IV.

HyPerformer Hy 498: Has white flowers, gray pubescence, and seed with a buff hila. Has no soybean cyst nematode resistance. Maturity Group IV.

Northrup King S 48-84: Has purple flowers, tawny pubescence, and seed with a brown hila. It is reported to have some tolerance to races 3 and 14 soybean cyst nematode. Ratings at Jackson have not supported this tolerance. Using a three-year average, the ratings for race 3 was 4.5 and race 4 was 4.4. It seems that it has some tolerance to race 5. The rating for the past year was 3.2 for race 5. Maturity Group IV.

Northrup King S 46-44: Has purple flowers, tawny pubescence and seed with black hila. Resistant to races 3 and 14 of soybean cyst nematode. Reported to have stem canker resistance. Maturity Group IV.

TN 4-86: Has purple flowers and tawny pubescence. Resistant to races 3 and 14 of the soybean cyst nematodes. Has good resistance to stem canker and high resistance to sudden death syndrome (SDS) and frogeye. Maturity Group IV.

TN 4-94: Has purple flowers and gray pubescence. Resistant to race 3 and 14 of the soybean cyst nematodes. Has moderate resistance to frogeye, SDS and stem canker. Maturity Group IV.

Manokin: Has white flowers, tawny pubescence and seed with black hila. Reported to have resistance to race 1 and 3 soybean cyst nematode, stem canker and frogeye disease. Maturity Group IV.

Maturity Group V

Asgrow A5403: Has purple flowers, gray pubescence and seed with an imperfect black hila. Has resistance to Race 3 soybean cyst nematode and moderate resistance to race 14. Has shown moderate resistance to stem canker. Maturity Group V.

Asgrow A5843: Has white flowers, gray pubescence and seed with buff hila. Has resistance to races 3 and 14 soybean cyst nematode. Reported to have resistance to stem canker. Maturity Group V.

Asgrow A5885: Has white flowers, tawny pubescence and seed with a black hila. Resistant to races 3 and 14 soybean cyst nematodes. Reported to have resistance to frogeye leaf spot, SDS and moderate resistance to stem canker. Maturity Group V.

Asgrow A5979: Has white flowers, gray pubescence, and seed with buff hila. Has resistance to race 3 soybean cyst nematode and moderate resistance to race 14. Maturity Group V. Has shown moderate resistance to stem canker.

AgraTech AT 555: Has white flowers, gray pubescence and seed with a buff hila. Reported to have resistance to races 3 and 14 soybean cyst nematode. Reported to have moderate resistance to stem canker and Sudden Death Syndrome (SDS). Maturity Group V.

AgraTech AT 550: Has purple flowers, tawny pubescence, and seed with black hila. Has resistance to races 3 and 14 of soybean cyst nematode. It is rated moderately resistant to stem canker. Maturity Group V.

Clifford: Has purple flowers, tawny pubescence and seed with black hila. No resistance to cyst nematode. Maturity group V.

HyPerformer HSC 501: Has purple flowers, tawny pubescence seed with a black hila. Resistant to races 3 and 14 soybean cyst nematode. Maturity Group V.

Holladay: Has purple flowers, gray pubescence and seed with an imperfect black hila. Has no resistance to cyst nematode. Maturity group V.

Northrup King S52-25: Has white flowers, tawny pubescence and seed with a black hila. Resistant to race 3 and 14 soybean cyst nematode. Maturity group V.

Northrup King S57-11: Has purple flowers, tawny pubescence and seed with a black hila. Resistant to races 3 and 14 soybean cyst nematode.

Deltapine DP 3588: Has purple flowers, tawny pubescence and seed with black hila. Resistance to race 3 soybean cyst nematode. Reported to have resistance to stem canker and frogeye leaf spot.

Deltapine DP 3589: Has purple flowers, tawny pubescence, and seed with black hila. Has resistance to race 3 soybean cyst nematode. Reported to have resistance to stem canker, aerial blight and frogeye. Maturity Group V.

Deltapine 415: Has purple flowers, grey pubescence, and seed with imperfect black hila. Resistant to race 3 of soybean cyst nematode. Reported to be resistant to stem canker. Maturity Group V.

Deltapine 105: Has purple flowers, gray pubescence, and seed with imperfect black hila. Tolerant to phytophthora root-rot and susceptible to soybean cyst nematodes. Has yielded well under soybean cyst nematode-free conditions. Late Maturity Group V.

FFR 542: Has purple flowers, gray pubescence and seed with imperfect black hila. Has resistance to races 3 and 14 (moderate) soybean cyst nematode. Reported to have moderate resistance to stem canker and frogeye leaf spot.

FFR 561: Has white flowers, gray pubescence, and seed with buff hila. Has no resistance to soybean cyst nematodes. Maturity Group V. Has shown resistance to stem canker.

FFR 553: Has purple flowers, brown pubescence and seed with black hila. Has no resistance to soybean cyst nematode. Reported to have resistance to frogeye leaf spot and moderate resistance to stem canker. Maturity Group V.

FFR 563: Has purple flowers, gray pubescence and seed with an imperfect black hila. Resistant to races 3 and 14 soybean cyst nematode.

Hartz 5218: Has purple flowers, brown pubescence and seed with black hila. Resistance to race 3 soybean cyst nematode. Maturity Group V.

Hutcheson: Has white flowers, gray pubescence, and seed with a buff hila. Has high resistance to stem canker and moderate resistance to frogeye disease, Maturity group V. Has no resistance to soybean cyst nematodes.

Pioneer 9584: Has white flowers, tawny pubescence and seed of black hila. Resistant to race 3 soybean cyst nematode.

Pioneer brand 9593: Has white flowers, tawny pubescence, and seed with a black hila. Has resistance to Race 3 soybean cyst nematode. Maturity Group V.

Pioneer brand 9551: Has white flowers, tawny pubescence and seed with black hila. Has resistance to races 3 and 14 soybean cyst nematodes. Maturity Group V.

HyPerformer Hy 574: Has purple flowers, tawny pubescence and seed with black hila. Has no soybean cyst nematode resistance. Maturity group V.

HyPerformer HSC 591: Has white flowers, tawny pubescence, and seed with black hila. Has resistance to races 3 and 14 soybean cyst nematode. Maturity Group V.

TN 5-92: Has white flowers, gray pubescence, and seed with black hila. Has resistance to races 3 and 5 soybean cyst nematodes. Maturity Group V.

TN 5-95: Has purple flowers and tawny pubescence. Has resistance to races 3 and 14 soybean cyst nematode. Has resistance to frogeye and stem canker. Maturity Group V.

Terra-Vig 5693: Has purple flowers and gray pubescence, and seed with an imperfect black hila. Maturity Group V.

## Maturity Group VI

Deltapine DP 3627: Has purple flowers, gray pubescence and seed with an imperfect hila. Has no resistance to soybean cyst nematode. Maturity Group VI.

Pioneer brand 9641: Has purple flowers, gray pubescence, and seed with imperfect hila. Has no soybean cyst nematode resistance. Maturity Group VI.

TN 6-90: Has white flowers, tawny pubescence, and seed with black hila. Has resistance to race 3 soybean cyst nematode. Has resistance to stem canker, frogeye and soybean mosaic virus. Maturity Group VI.

Northrup King S66-90: Has purple flowers, gray pubescence, and seed with buff hila. Has resistance to race 3 and 14 soybean cyst nematode. Reported to have resistance to stem canker. Maturity group VI.

## GRAIN SORGHUM

### Non-bird resistant varieties

DeKalb DK 40y: A medium variety in plant height and early maturity. Has a yellow endosperm. Reported to be resistant to MDMV and greenbug insects.

Deltapine G-522A: A medium-tall variety with resistance to MDMV, head smut, and anthracnose. Red pericarp and hetero-yellow endosperm.

Deltapine G-522DR: A medium variety in plant height with resistance to MDMV, head smut, anthracnose, and downy mildew. Red pericarp and hetero-yellow endosperm.

Deltapine 1552: A medium to tall variety medium in maturity. Has a hetero-yellow with a red pericarp. Reported to have resistance to head smut and anthracnose.

HyPerformer HSC Wings: A medium-tall variety with medium-tight heads. Hetero-yellow endosperm. Reported to be resistant to MDMV, head smut, anthracnose and downy mildew.

HyPerformer HSC Cherokee: A medium variety in plant height. Reddish-yellow grain color with a red pericarp and hetero-yellow endosperm. Reported to be resistant to MDMV, head smut, anthracnose and downy mildew.

Pioneer brand 8212y: A medium-tall variety in plant height with a semi-open head. Medium-full in maturity. Has yellow endosperm and X-yellow pericarp. Reported to have good resistance to downy mildew and head smut.

Pioneer brand 8446: A medium-tall variety with heads of bronze grain with a yellow endosperm. Reported to have excellent resistance to head smut, Fusarium rot and good resistance to gray leaf spot.

Northrup King KS 710: A non-bird resistant variety with hetero-yellow endosperm and brown pericarp. Has some tolerance to MDMV and head smut.

Topaz: A medium variety in plant height and maturity. Resistant to head smut and downy mildew. Red pericarp with a hetero-yellow endosperm.

## OATS

### Fall-Seeded

FFR Southern States 76-30: About two days earlier than Cumberland in maturity and a few inches taller in plant height. It has out-yielded Cumberland and Coker 716 in the state variety test with standing ability similar to Coker 716.

## BARLEY

Anson: A medium maturing, medium test weight variety with good straw strength. It has good disease resistance to leaf rust and powdery mildew. Test weight has been similar to Wysor.

Wysor: A winter-type feed barley that is six-rowed and awnleted to awnless, with short rough awns usually occurring on central spikelets and occasionally on lateral spikelets. Wysor is similar to Henry in test weight, height, lodging, and winter hardiness. Wysor is reported to have good resistance to scald, powdery mildew and leaf rust found in Virginia. It is also reported to have some resistance to barley yellow dwarf virus.

## WHEAT

FFR 525: An early maturity soft red winter wheat variety with fair test weight (bushel wt). It has been susceptible to leaf rust, mildew and glume blotch in trials.

FFR 350: An early-medium maturity soft red winter wheat variety with average test weight. Medium-tall in plant height.

FFR 555: A medium maturity soft red winter wheat variety with fair test weight. Has shown resistance to mildew and glume blotch.

Freedom: A medium maturity soft red winter wheat with low test weight. Has medium plant height and average test weight.

Gore: A medium maturing soft red winter wheat variety with average test weight, medium in plant height. Reported to have barley yellow dwarf and leaf rust resistance, not resistant to hessian fly.

Hickory: An awnless early-medium maturity soft red winter wheat with above average test weight. Reported to have resistance to some races of hessian fly.

Northrup King Coker 9803: An early maturity soft red winter variety with resistance to leaf rust and mildew with some tolerance to septoria leaf blotch and reported to be resistant to soil borne mosaic. Has good test weight.

Madison: A medium-early maturing, apically-awnleted white-chaffed cultivar of medium height and straw strength. Moderate resistance to powdery mildew, resistant to spindle streak virus, and moderately tolerant to septoria.

Mallard: An early-medium maturity soft red winter wheat variety with fair test weight. A short-strawed variety with good straw strength.

Pioneer brand 2580: An awned medium-maturing soft red winter wheat with average test weight. Not resistant to hessian fly.

Pioneer brand 2684: An awned medium-maturing soft red winter wheat with above average test weight. Pioneer brand 2684 and Pioneer brand 2580 are similar in plant height and lodging resistance. Pioneer brand 2684 has shown tolerance to some races of hessian fly.

Northrup King 9543: An early-medium maturity soft red winter wheat variety with good test weight. Reported to be resistant to hessian fly biotype E.

Jackson: A medium-maturing soft red winter wheat with average test weight. It is reported to have moderate resistance to powdery mildew and septorian leaf blotch. Jackson has been susceptible to leaf rust in the variety trials. Hessian fly resistance is not known at this time.

Sawyer: An early-maturing variety with moderate straw strength. It is similar in height to Saluda. It is reported to have moderate resistance to leaf and stem rust, powdery mildew, and septoria leaf blotch.

Verne: A soft red winter cultivar with medium early maturity. It has shown some tolerance to leaf rust, but has been susceptible to mildew and glume blotch.

Wakefield: An apically-awnleted, white-chaffed, mid-to-late season cultivar. It is reported to have some resistance to wheat spindle streak virus, and is moderately tolerant to septoria. Wakefield is a soft red winter wheat cultivar.

#### ALFALFA

Aggressor: A winter-hardy variety with good recovery ability. It is reported to be highly resistant to bacterial wilt, fusarium wilt, anthracnose and phytophthora root rot. It also has resistance to verticillium wilt.

Apollo Supreme: A winter-hardy variety with good recovery ability. Apollo Supreme is reported to be highly resistant to bacterial wilt, fusarium wilt and anthracnose. It also has high resistance to verticillium wilt.

Alfagrazz: A variety developed for grazing. It is reported to have moderate resistance to bacterial wilt and anthracnose. It also has resistance to fusarium wilt. It has persisted well under frequent clipping and grazing studies.

Belmont: Flower color is purple and blue. Belmont starts growth early in the spring and recovers rapidly after cutting. It is reported to have high to moderate resistance to the wilts, root rots, stem and leaf diseases that attack alfalfa. Belmont is reported to have high resistance to the pea and spotted alfalfa aphids.

Chief: Similar fall dormancy to Saranac (4 rating). It is reported to have high resistance to bacterial wilt and moderate-high resistance to verticillium wilt, fusarium wilt and anthracnose.

Cimarron VR: A winter hardy variety with good recovery ability. It is reported to have high resistance to bacterial wilt, fusarium wilt and anthracnose. It also has resistance to phytophthora root rot and verticillium wilt.

Garst 636: Has a fall dormancy rating of 2. It is reported to have (HR) high resistance to bacterial wilt and moderate resistance to anthracnose. It is also reported to have resistance to verticillium wilt and fusarium wilt.

Legacy: A winter-hardy variety. It is reported to have high resistance to bacterial wilt, fusarium wilt, phytophthora root rot, and spotted alfalfa aphid. It is also reported to have resistance to verticillium wilt and anthracnose.

Multi-King 1: A winter-hardy variety that is reported to have a high leaf to stem ratio. It is also reported to have high resistance to bacterial wilt and fusarium wilt. It is also reported to have resistance to verticillium wilt, anthracnose and phytophthora root rot.

Pioneer brand 5432: A winter-hardy variety with good recovery ability. Reported to have high resistance to bacterial wilt and fusarium wilt. Has resistance to verticillium wilt and moderate resistance to phytophthora.

1996  
PERFORMANCE OF FIELD CROP VARIETIES

Corn - Grain Sorghum - Summer Annuals - Oats  
Barley - Wheat - Rye - Soybeans

DATA FOR 1996  
WITH SUMMARIES OF RESULTS FROM PREVIOUS YEARS

INTRODUCTION

The purpose of the project, "Field Crop Variety Evaluation", is to test field crop varieties available to farmers in Tennessee and neighboring states, as well as the best experimental varieties being developed by experiment stations, other public agencies and private companies.

The tests were conducted using field plot designs, fertility levels and experimental techniques that have been found suitable for each crop.

Committees composed of specialists from the research, resident instruction and extension staffs of the University of Tennessee Institute of Agriculture (based on a study of the performance data) determine varieties to be recommended.

For a variety to be recommended, it must yield well and have other characteristics suitable for Tennessee conditions.

PRESENTATION OF DATA

The tests were conducted in each of the principal agricultural regions of the state where the specific crop is grown. Plots of each variety were replicated several times at each location. An average of the performance of a variety across the area of adaptation and over a period of years is the best basis for evaluation.

The tables on the following pages have been prepared with the entries listed in order of performance, the highest-yielding entry being listed first.

Least significant difference (L.S.D.) values at the five percent level for the 1996 tests are shown at the bottom of each table. Yields of any two varieties being compared must differ by at least this amount to be considered different in yielding ability. Also, coefficient of variation (C.V. %) values are shown at the bottom of each table. This value is a measure of the variability found within each experiment. At each location where tests were conducted in 1996, the soil types are reported at the end of the table.

## PERFORMANCE OF CORN HYBRIDS FROM 1994 THROUGH 1996

The early-season hybrid trials were conducted at three locations, medium-season hybrids were evaluated at seven locations and the full-season hybrids were tested at four locations. At Jackson full-season hybrids were evaluated with and without irrigation. Early hybrids at Ames Plantation were also evaluated for response to irrigation.

All corn hybrid trials were over-planted and thinned to a population from 19,000 to 28,000 plants per acre. Population varied with location but was the same for all hybrids at a given location. Variation in population among locations was due to different row spacings. Spacing within the row was the same at all locations. Most tests were conducted using thirty to thirty-six inch row spacings. The tests were fertilized with 150 pounds or more of nitrogen per acre. A portion of the nitrogen was applied prior to seeding and the remainder was applied as a sidedressing. This practice was followed whenever possible. Phosphorus and potassium were applied at least in the amount recommended by soil test results. The plot size for mechanically-harvested plots was two rows 25 or 30 feet in length. Plots were replicated four times at each location. In 1996, the corn hybrid studies at Crossville, Ames Plantation, Jackson, Milan, Martin, Spring Hill, and Knoxville were harvested with a combine-sheller. At Ames Plantation in 1995, the full-season and early-season non-irrigated trials were hand-harvested. All corn trials at Milan were grown no-till following corn.

Two medium-season corn hybrid trials were grown each year with one being referred to as the 500 group and the other the 600 group. The 500 and 600 refer to the hybrid entry numbers. Two trials of this maturity group are conducted adjacent to each other whenever possible. Hybrids of mid-season maturity are evaluated in two groups because of the large number of hybrids submitted for testing. Any single corn test is limited to 40 entries.

## Yield Results

### Early-Season

The early-season data for 1996 are reported in Tables 1 through 6. Yields were high at all locations (Table 1). The average yield among environments ranged from 146 (Ames Plantation un-irrigated) to 229 bu/a at Knoxville (Table 1). The yield at Knoxville ranged from 197 to 255 bu per acre. The test at Knoxville was irrigated at silking. Without this irrigation, the yields would have been reduced. The C.V. (12.5) was highest at Ames Plantation (un-irrigated) and lowest (6.4) on irrigated plots in 1996.

Pioneer brand 3245, Pioneer brand 3335, and Zimmerman Z 62 W produced an average yield of 195 bu per acre, respectively (Table 1). Lodging was low at all locations in 1996. The early-season tests were not harvested at Crossville in 1995 or 1996 due to storm damage in 1995 and the lack of proper border in 1996. The ear height of these early-season hybrids ranged from 44 to 55 inches (Table 2). Average grain moisture at harvest ranged from a low of 12.2 to a high of 16.0% (Table 2).

Two years of early-season data are shown in Tables 3 and 4. The top producing hybrid, Pioneer brand 3260 produced significantly higher yields than the average of 178 bu/a. Terral TV 2543 was significantly lower than the average (Table 3). HyPerformer HY 9899 V had an average grain moisture at harvest of 15.1%. This was 1% higher than the next hybrid in the test (Table 4).

Ten early-season hybrids have been evaluated for three or more years (Tables 5 and 6). The leading hybrids in yield over the three year period (1994-96) at three locations were HyPerformer HS 9773, HyPerformer HY 9899V, Beck 72X and Pioneer brand 3245.

#### Medium-Season 500 Group

Results of the medium-season 500 group hybrids are reported in Tables 7 through 12. The growing season was good at most locations in 1996. No 1996 data are reported for Spring Hill due to a high C.V. and low R-Square value.

The yields at Knoxville are excellent due to one irrigation at silking and timely rainfall thereafter during the growing season.

The yields of individual hybrids range from a low of 96 bu/a at Springfield to a high of 266 bu/a at Knoxville. The average yield was 122 bu/a at Springfield to 146 at Crossville, 153 at Greeneville, 174 at Milan, 178 at Martin and 234 at Knoxville. FFR 883 GLS and Pioneer Brand 3223 produced the highest average yield of 188 and 187 bu/a respectively (Table 7). Eight hybrids produced higher yields than the mean of 168 bu/a (Table 7). The average ear height ranged from a low of 44 to a high of 55 inches. Lodged plants were low for all hybrids (Table 8).

The two year medium-season 500 group data are presented in Tables 9 and 10. Four Pioneer brand hybrids were among the highest producing hybrids in grain yield (Table 9). Four of the hybrids produced higher yields than the mean of 163 bu/a. The grain moisture at harvest ranged from 15.0 to 17.8 (Table 10).

Three years of results are presented in Tables 11 and 12. Again, Pioneer brand 3223, 3245, 3163, and 3154 were among the higher producing hybrids (Table 11). Three hybrids produced lower yields than the mean of 169.

#### Medium-Season 600 Group

The medium-season 600 data are reported in Tables 13 through 18. Pioneer brand 3245 was used as a check hybrid in the early-season and both 600 and 500 groups. FFR 943, ICI/Garst 8220 and Pioneer brand 3223 were among the highest producing hybrids of medium-season (Group 600).

Two years' data are reported in Tables 15 and 16. ICI/Garst 8220, DeKalb DK 714, FFR 943 and Pioneer brand 3245 produced higher yields than the mean of

167 bu/a (Table 15). The grain moisture at harvest ranged from a low of 14.8 to a high of 16.9 (Table 16).

Three years data for the medium-season (group 600) hybrids are shown in Tables 17 and 18. ICI/Garst 8220, DeKalb DK 714, and FFR 943 were the three leading hybrids in average yield (Table 17). The average ear height ranged from 48.0 to 54.4 in. (Table 18). Grain moisture at harvest ranged from 15.8 to 18.1%.

#### Full-Season

In 1996, Crow's 702, DeKalb DK 743, Asgrow E 939552, Pfister 3976, and Cargill 8936 produced higher yields than the mean of 182 bu/a (Table 19).

Two years' full-season data are shown in tables 21 and 22. Crow's 702, Pfister 3976 and DeKalb DK 743 produced higher yields than the mean of 181 bu per acre, and Ciba Funk's G 4714 produced yields lower than the mean (Table 21).

Three years' data for the full-season hybrids are shown in tables 23 and 24. Crow's 702, DeKalb DK 743 and Cargill 8936 were among the highest producing hybrids (Table 23).

#### Entries Arrived Late -- 1996

Seed of six hybrids were received late and they were not included in the regular hybrid trials. These hybrids were evaluated at five locations and the data are reported in Tables 25 and 26. The average moisture of these hybrids ranged from 16.1 to 19.4 (Table 26).

Table 1. Corn: Yield of early-season hybrids evaluated at three locations in 1996.

<sup>1</sup>Rating based of a scale of 1 through 9 with 1 being excellent and 9 poor.

-----Wheat-----

Thirty-six soft red winter wheat varieties were evaluated at Knoxville, Greeneville, Crossville, Spring Hill, Springfield, Milan, Martin, and Jackson in 1996. Ten varieties were evaluated at Ames Plantation in 1996.

The wheat variety trials at Jackson were severely injured by a late spring freeze in 1996. Winter injury was also noted at Springfield, Crossville, and Milan in 1996. The yield of all varieties at Crossville was reduced from the late spring freeze.

The wheat data are reported in Tables 27 through 41 with 1996 data in Tables 27 through 36. Pioneer brand 2552, Pioneer brand 2568, Shiloh, Hopewell and Verne were among the top producing varieties in 1996 (Table 27). Trical 498, Morey and Clemson 201 were among the lowest producing varieties in 1996. Low yields were primarily due to winter and spring cold injury. Clemson 201 and Morey did not perform well at any location in 1996.

The percent stand for the state, excluding Jackson, is presented in table 28. Clemson 201, Morey and Trical 498 had the poorest spring stand which ranged from 21 % to 29 % (Table 28).

The maturity, plant height and test weight data are shown by individual locations in 1996 due to the variability in winter injury from location to location. These data are shown in Tables 29 through 36.

The Jackson data were not included in the state average because many varieties had a 100% winter kill and eleven out of 36 had a stand of 10% or less in the late spring (Table 36).

Ten wheat varieties were evaluated at Ames Plantation in 1996 with FFR 555, Clemens, Cardinal and FFR 525 among the leading varieties in yield, (Table 37).

The two-year wheat data are presented in Tables 38 and 39. The leading varieties for yield using a two-year average across six locations were Verne, Pioneer brand 2580, Pioneer brand 2684, Shiloh, and Clemens (Table 38). Trical 498 (Triticale), Stuckey and Morey produced lower yields than the two-year average mean of 52.5 BU/A (Table 38).

The three-year wheat data are shown in Tables 41 and 42. The leading varieties in yield were Verne, Pioneer brand 2580, Pioneer brand 2684, FFR 555 and Pioneer brand 2628 (Table 40). Using the three year average Madison produced three bushels more than Wakefield. Madison produced higher yields than Wakefield the past two years (1995 and 1996).

The recommended wheat varieties for 1996-97 are FFR 525, FFR 555, FFR 350<sup>1</sup>, Freedom, Gore<sup>1</sup>, Hickory, Northrup King Coker 9803, Madison, Mallard<sup>1</sup>, Pioneer brand 2580, Pioneer brand 2684, Pioneer brand 2628, Northrup King Coker 9543, Jackson, Sawyer<sup>1</sup>, Verne and Wakefield.

-----Barley-----

Five winter barley varieties were evaluated in 1996 (Tables 42 through 46). There was no difference in average yield among the first four varieties. Pamunkey produced the lowest average yield of 59 bushels per acre (Table 46). No data are reported for Jackson and Crossville due to winter kill.

-----Fall-seeded Oats-----

No yield data are reported for winter oats in 1996 due to winter killing of all varieties.

-----Spring Oats-----

Spring oats were evaluated at two locations in 1996. The data are reported in Tables 47 and 48. The top five yielding varieties were Prairie, Horicon, Brawn, Ogle and Dane. Centennial produced the lowest average yield at both Knoxville and Springfield in 1996.

<sup>1</sup>Present plans indicate that these varieties will not be recommended after 1996.

-----Rye and Triticale-----

Three Triticale varieties were evaluated with six rye varieties for grain at Knoxville in 1996, (Table 49). A forage trial was conducted where fall-seeded oats, wheat, rye, and triticale were compared in the same test. This data will be reported in the Forage Research Report which will be published at a later date.

Table 27. Wheat: Yield of wheat varieties evaluated at seven locations in 1996.

<sup>1</sup>Ernie and FFR Exp. 1401 were not included in the regular variety trials because the entries arrived too late.

Early Maturing Soybeans  
(Maturity Group IV)

In 1996, forty-two early-maturing varieties were evaluated at the following five locations: Knoxville, Crossville, Springfield, Milan, and Ames Plantation. Commercial strains of maturity group IV were grown at Jackson only. The maturity of varieties in the early test ranged from late maturity group IV to the earlier maturity group III. The maturity group III and IV results are presented in Tables 51 through 56. HyPerformer AP 4880, Pioneer brand 9482 and Manokin produced higher yields than the mean of 51.7 bu/a.

TN Exp TN 92-73 and Dyna-Gro 3495 produced lower yields than the mean (Table 51).

The two-year yield and other characteristics are presented in Tables 53 and 54. Gutwein 7474, Deltapine DP 3478, Manokin, Northrup King S 48-14, Asgrow A 4922, Hartz H 4994, and FFR 514 produced higher yields than the check variety TN 4-86 (Table 53).

Three years data are shown in Tables 55 and 56. Deltapine DP 3478, Manokin, Hartz H 4994, Chesapeake, and Asgrow A 4715 yielded more than the check variety TN 4-86 (Table 55). Manokin and Hartz H 4994 were two of the later maturing varieties in this maturity group (Table 56).

Maturity Group V

The maturity group V varieties were evaluated at Knoxville, Spring Hill, Springfield, Martin, Milan and Ames Plantation.

Maturity group V trials consisted of 60 entries in 1996. These 60 varieties were evaluated in two rows instead of the standard four row plots. All other trials of maturity group IV and VI were evaluated using four row plots. All yields were adjusted to 13% moisture. At Milan all maturity groups were evaluated in plots 30 feet long and 7.5 inches row spacing.

The data for maturity group V are reported in Tables 57 through 62. The test at Greeneville was harvested late in 1996 and results will be reported later.

Asgrow A 5885, Deltapine DP 3571S, Asgrow A 5547, Asgrow A 5944, Asgrow A 5979, Pioneer brand 9584, Hutcheson, Asgrow A 5848, Dixie King 5475, Pioneer brand 9594, and Asgrow A 5843 produced higher yields than the mean of 54.6 bu/a (Table 57).

The two-year results for maturity group V are shown in Tables 59 and 60. Deltapine DP 3571S, Asgrow A 5547, Asgrow A 5979, Asgrow A 5885, Pioneer brand 9584, Hutcheson, Deltapine DP 3519S, and Asgrow A 5843 produced higher yields than the mean of 49.5 bu/a (Table 59).

Three-year results are shown in Tables 61 and 62. The leading varieties over this three year period were Asgrow A 5885, Asgrow A 5979, Asgrow A 5843, Hutcheson, Pioneer brand 9584, and Deltapine 415.

#### Maturity Group VI

Four late-maturing soybean varieties (Group VI) were grown at Knoxville, Spring Hill, Milan and Ames Plantation in 1996.

The late-maturing soybean data for 1996 are reported in Tables 63 and 64.

No two or three year data are presented for this maturity group due to the low number of varieties evaluated for three years.

#### Soybean Strains

Six maturity group IV were evaluated at Jackson in 1996 (Table 65). At Knoxville in 1996, four varieties were evaluated in a small test adjacent to the regular variety trials. The small test at Knoxville was due to some varieties arriving late and the regular state variety trials had been already planted in some cases (Table 66).

### Performance of grain sorghum varieties

Twenty six varieties were evaluated at Springfield and Milan in 1996.

The test at Milan was planted no-till in killed wheat.

The data are shown in Table 67. The leading varieties in yield were FFR 351, FFR, 331, Pioneer brand 8305, FFR 321, HyPerformer AP 9850 and HyPerformer Cherokee. HyPerformer AP 9210 was among the lowest in yield.
