APPENDIX 32

CONDITIONAL ATTRIBUTES OF MAPPED ARTIFACTS FROM THE TOPPER SITE
(38AL23)
Appendix 32 presents the conditional attributes of mapped items from the study sample at the Topper Site. Conditional attributes are used to distinguish specific characteristics about the form or appearance of an artifact or lithic item. Categories of conditional attributes used in this study include thermal alteration (thermally altered, crazing, pot-lidding), presence, absence and amount of cortex, and completedness (proximal, medial distal, or complete). Table A32-1 presents the conditional attributes of artifacts from the study sample. Individual examples of artifacts that retain specific conditional attributes are presented in Figures A32-1 through A32-.
