The publications in this collection represent the historical publishing record of the UT Agricultural Experiment Station and do not necessarily reflect current scientific knowledge or recommendations. Current information about UT Ag Research can be found at the UT Ag Research website. This Indoor Environmental Concerns - Lead Poisoning is brought to you for free and open access by the UT Extension Publications at Trace: Tennessee Research and Creative Exchange. It has been accepted for inclusion in Environment (Indoor & Outdoor) by an authorized administrator of Trace: Tennessee Research and Creative Exchange. For more information, please contact trace@utk.edu.
Caution:
Home remedies and medicines can help cure sick people. However, some of these home remedies contain lead and will make you very sick.

These home remedies contain lead and are very dangerous!

Azarcon  a bright orange powder
also known as Rueda, Coral, Maria Luisa, Alarcon, Liga

Greta   a yellow powder

• Both Azarcon and Greta are given for “empacho” (intestinal illness).

• Both Azarcon and Greta are almost 100 percent lead. Any amount is poisonous to children and adults.

What can I do if I’ve taken or have given my child a home remedy that contains lead?

You should get medical attention immediately. Call your doctor, clinic or local health department for more information or for help with treatment for lead poisoning. Ask your health department to arrange for a free test to determine if there is lead in your Azarcon or Greta. Medical information is confidential. Your health is the main concern.

You can also call the Poison Control Center at 1-800-222-1222. Someone is available 24 hours/day to answer your questions and help in an emergency.

Why is lead dangerous?

Lead can cause damage to the kidneys, nervous system and brain. Children have suffered permanent brain damage and even died from the use of Azarcon and Greta.

Children with lead poisoning usually do not look or act sick. When they do show signs of lead poisoning, their symptoms can be very much like empacho. The symptoms of lead poisoning include tiredness, sleeplessness, stomachache and vomiting.
Testing your children

Children ages 9 months through 5 years are at greatest risk for lead poisoning. Most children with lead poisoning do not look or act sick. Ask your doctor to do a blood lead test, and to explain the results to you. This test is the only way to know if your child is being poisoned. Most kids will have a blood lead level of less than 10 µg/dL.

If you have TennCare, your regular doctor or clinic can order the blood tests to check for lead poisoning, if appropriate. Many private health insurance policies will also cover the cost of the test.

Danger!!

These home remedies also contain lead and can make you very sick.

Hmong community:
Pay-loo-ah a red powder given for rash or fever

Asian-Indian community:
Ghasard a brown powder given as an aid to digestion
Bala Goli a round, flat, black bean dissolved in "gripe water" and used for stomachache
Kandu a red powder used to treat stomachache

Arab-American community:
Kohl (Alkohl) a powder used both as a cosmetic eye make-up and applied to skin infections and the navel of a newborn child

This publication was adapted for Tennessee from “Lead in Home Remedies” from the California Department of Health Services.
