A SUMMARY REPORT OF SNAP BEAN VARIETY AND BREEDING LINES TESTED IN  
THE SOUTHERN COOPERATIVE VEGETABLE TRIALS, 1982

Establishment of Trials

Individuals in the United States known to breed or select for improvement of snap beans were invited to enter selections in the trial in January, 1982. New entries were placed in the observational trial. After testing in 1982, these selections will be dropped, repeated in the 1983 observational trial, or advanced to the 1983 replicated trial. The 1982 replicated trial consisted of selections retained from the 1981 replicated trial and advanced from the 1981 observational trial. An entry is usually not tested for more than two years in either trial.

Previous cooperators were polled in February concerning participation in the 1982 trials. Requests were returned from 15 locations for 19 sets of observational and 22 sets of replicated seed lots. Successful tests were conducted and reports were returned for 12 observational tests at 9 locations and 13 replicated tests at 10 locations. Reports were returned on the standard report form. Ratings were not complete on all reports.

Comments on Replicated Trials

Nine entries were tested in the replicated trials with Eagle as the check cultivar. Lines E 0215 and BBL274-14 received the highest scores of 50 and 49 points, respectively. Lines Pirate, BBL274-17, Eagle, and Win received good scores (43 - 32). Lines Peak and BBL75-091 received only fair scores of 28 and 23 points, respectively. The BBL78-118 line received a low score of 12 points. After testing for two years in the replicated trials, BBL75-091 and Win will be dropped. Lines BBL78-118 and Peak will be dropped due to low scores. Those to repeat in the 1983 trials are Pirate, Eagle (check), BBL274-14, BBL274-17, and E 0215.

Comments on Observational Trials

Sixteen entries were tested in the observational trials with Eagle as the check cultivar. The highest scoring entries were FM 102 and BBL77-063 with 34 and 30 points, respectively. Good scores (26 - 21 points) were received by FM 103, H457B-4-1-8, H457B-4-1-6, AVX 9014, and AVX 9293. Fair scores (20 - 15 points) were received by Ver. 37, Bahalores, AVX 117, Epoch, 81 BP-211, FM 115, and 81 BP-200. Lines that received low scores (10 - 3 points) were AVX 167 and Cur. 93. Entries to advance to the 1983 replicated trials are FM 102, BBL77-063, FM 103, H457B-4-1-8, H457B-4-1-6, AVX 9014, and AVX 9293. Line Ver. 37 will be repeated in the 1983 observational trial. All other lines will be dropped.
