The publications in this collection represent the historical publishing record of the UT Agricultural Experiment Station and do not necessarily reflect current scientific knowledge or recommendations. Current information about UT Ag Research can be found at the UT Ag Research website. This Gardening - Vegetables: Selecting & Planting is brought to you for free and open access by the UT Extension Publications at Trace: Tennessee Research and Creative Exchange. It has been accepted for inclusion in Home Garden, Lawn, and Landscape by an authorized administrator of Trace: Tennessee Research and Creative Exchange. For more information, please contact trace@utk.edu.
Steps to Planning a Theme Garden

1. Determine what type of theme garden you would like. In this case, we want an Asian-American Garden.

2. Determine the location and size of your garden. Select an area that receives at least six hours of full sunlight every day and is close to a water source.

3. Take a soil sample and send it to be analyzed with the help of your county Extension agent.

4. The shape of your garden may be a 4’x4’ square area or whatever fits into your landscape scheme!

5. Amend the soil according to soil test results. Using a tiller, work in a 3-inch layer of organic matter (peat moss, manure, rotted compost, etc.) to improve the soil structure.

6. Select plants from list of recommended varieties.

7. Plant warm-season vegetables, such as tomatoes, peppers, eggplant and most herbs, after April 25th to avoid frost or freeze damage.

8. Water, weed, fertilize and harvest on a weekly basis throughout the growing season.

9. Enjoy your abundance of fresh vegetables and herbs.

Asian-American Theme Gardens will contain stir-fry type plants introduced to the United States by Asian immigrants.

Asian cultures relate to nature by capturing its heart and spirit and incorporating that essence into daily life. Asian peoples have long been masters in the art of gardening in small courtyards.

When using fresh greens to make salad mixes, use leaves with mild flavors such as lettuce or endive to make up the bulk of the salad. Sharp or pungent leaves such as basil, coriander, parsley, mizspoona and mustards should be used in smaller amounts as an accent.

Recommended Plants

Red Mustard: Mix young leaves in with other salad greens or sprinkle flowers on sandwiches.

Mizspoona: Adds a spicy bite to salads or stir-fry dishes.
Pac Choi: A traditional stir-fry. Separate leaf from stem and chop both into 2-inch wide diagonal chunks. Also good raw in salads.

Snap Peas: Plant early in spring when temperatures are cool. Harvest daily.

‘Thai’ Basil: This herb with its warm spicy flavor is a native of Africa and Asia held in divine essence. Pick leaves when young for best flavor.

Others: Asian red kale, eggplant, coriander, radish, mizuna, early endive and many lettuce varieties.

Written by Karla Kean, Montgomery County Extension Agent, and Beth Babbit, Tennessee Master Gardener Coordinator.
